

Speak up for Scoliosis

June is Scoliosis Awareness Month

Scoliosis is a condition that causes the spine to abnormally curve sideways, into an “S” or “C” shape. Although many people have not heard of the condition it is surprisingly common, impacting infants, adolescents and adults of all races, classes and both genders. Approximately one out of every six children diagnosed with scoliosis will have a curve that requires active treatment, sometimes involving surgery. Early diagnosis is the key to taking important first steps to providing treatment that may prevent more serious problems.

June is Scoliosis Awareness Month and we want YOU to get involved, to speak up for scoliosis and to raise funds to support people with the condition.

Be a part of it!
